This healthcare and life sciences edition of Law Update examines the developments over the past year in the industries across the Middle East and North Africa. Amidst the continued plethora of COVID-19 related legislation, the regulators have continued to advance their healthcare transformation strategies. Our healthcare and life sciences sector experts remain exceptionally busy, not only supporting our clients' understanding of COVID-19 related regulations but also the broader suite of regulatory change as the region continues to expand healthcare provision and the adoption of digital health solutions.

This edition contains 12 sector specific articles covering a wide range of topics impacting the healthcare and life sciences industries across the region. In the United Arab Emirates ('**UAE**'), we have observed another busy period of regulatory output. As companies seek to have their employees return to working in an office, the question of COVID-19 vaccines and employers obligations to ensure the health and safety of their employees is a hot topic. We address the state of play in the UAE, the Kingdom of Saudi Arabia ('**KSA**') and State of Qatar (see 'COVID/Vaccines: The New Normal: Return to Work Arrangements' [here](#)).

In an effort to advance the healthcare system in the Emirate of Dubai, the Dubai Health Authority ('**DHA**') has been bifurcated into the DHA and the Dubai Academic Health Corporation. We dive into what this means in our article 'Establishment of the Dubai Academic Health Corporation' ([here](#)). On the whole, the DHA regulatory arm was extremely active; we set out the key Dubai healthcare regulatory developments of 2021 in our similarly titled article (see 'Key Dubai Healthcare Regulatory Developments of 2021', [here](#)). Following last year's Ministry of Health & Prevention's executive regulations to the federal law on

information communication technology in healthcare, a new resolution was passed detailing the exemptions to the restriction on the transfer of health data outside of the UAE (see 'Setting Health Boundaries', [here](#)). As vaccines have been a focal point for many regulators these last few years, we discuss vaccine patents and their legal framework in the UAE (see 'Vaccine Patents and Legal Framework in the UAE', [here](#)).

Further, the Emirate of Sharjah's health authority established the Sharjah Healthcare City free zone, implementing its regulatory framework last year (read more [here](#)). On the litigation front, we examine a health facility's liability for the safety of medical equipment, based on a recent landmark judgment issued in favour of one of Al Tamimi & Company's health facility clients (read more [here](#)). When a court assess damages payable to a patient after a medical error has occurred in the UAE, whether a patient obtained subsequent medical care through their insurance coverage will impact the amount of damages awarded, as elaborated in our judgement summary 'UAE Judgment - The assessment of damages payable to injured healthcare patients' ([here](#)).

In KSA, the Saudi Food & Drug Authority ('**SFDA**') issued new guidance on artificial intelligence and big data medical devices, which follows Saudi's efforts to ensure the adoption innovative technology for the delivery of healthcare services in the Kingdom (see 'New Guidance for AI and Big Data Medical Devices in Saudi Arabia' [here](#)). When it comes to medical devices and pharmaceutical, in 2021 there was a deluge of updates to these regulatory frameworks, including a long awaited new medical device law to supersede the interim regulations; we highlight the key medical device and pharmaceutical laws and regulatory developments of the past year in our article 'Key Saudi Medical Device and Pharmaceutical Laws' ([here](#)).

In the past decade, multiple nations in the MENA region have increased their focus on enhancing scientific capabilities in order to tap into the prospects and benefits associated with stem-cell research. Our Bahrain team provides a high-level overview of some of the key legislative developments in the field of stem cell research in Bahrain (read more [here](#)).

Lastly, in recent years, the region has been projected to be one of the fastest growing markets for clinical research, due to availability of the required infrastructure, access to patients, faster timelines and lower costs compared to other markets. As the second-biggest destination country for clinical trials in Africa, Egypt has witnessed a steady increase in the number of trials it hosts. The Egyptian Parliament approved a clinical medical research bill at the end of 2020, considered to be the first unified legal framework regulating medical research (read more [here](#)).

We hope that you enjoy this special edition of Law Update. Al Tamimi & Company's specialist healthcare and life sciences lawyers across our 16 offices in nine jurisdictions regularly advise on legal and regulatory matters concerning the healthcare and life sciences sectors.
