Technology

Our Offering

AI Tamimi & Company provides a broad range of technology related legal services across all sectors, supporting clients through every stage of their technology needs.

We offer expert advisory and transactional guidance on the acquisition, development, licensing, operation, governance, and implementation of technology-based systems, whether that involves software, hardware, applications, or services.

Our work covers critical areas such as digital transformation initiatives, managing cybersecurity risks and data breaches, navigating the procurement and use of artificial intelligence systems, and ensuring the resilience and sustainability of tech solutions. Beyond serving diverse industries, we maintain a full service focus on the technology sector itself, working closely with startups, established tech companies, venture capital firms, software developers, hardware manufacturers, telecommunications providers, cybersecurity firms, fintech innovators, and AI enterprises. This allows us to address the unique challenges and opportunities faced by businesses involved in the research, development, production, distribution, and regulation of technology products and services, positioning our clients for success in an increasingly tech driven world.

We have developed a technology hub to showcase how our lawyers help clients navigate the legal, regulatory, and commercial challenges. Keep up to date with recent developments [here](#).

How We're Using Technology To Benefit Our Clients

We use advanced legal technology to benefit our clients by streamlining matter management, enhancing accuracy, and speeding up delivery while applying expert legal judgment to reduce risk and complexity. Our best-in-class systems help us work efficiently, gain insights from data, and communicate clearly. By integrating AI, we accelerate research, drafting, and compliance processes, with all outputs carefully reviewed by lawyers to ensure quality and reliability. This tech driven approach enables us to deliver faster, cost-effective, and high quality legal solutions focused on maximizing client value.

H

Harvey is an advanced legal AI tool. By using Harvey, our teams accelerate research-oriented work such as case law analysis, regulatory reviews, and document comparisons, enabling us to deliver insights with greater speed and efficiency. Harvey enhances our ability to provide timely, data-driven, and high-quality advice to our clients.

Legora is an advanced legal AI platform designed to support complex due diligence processes especially in mergers and acquisitions. By leveraging Legora, our teams can efficiently review and analyze large volumes of documents, enabling us to identify key insights and risks with greater speed and accuracy. This allows us to provide our clients with timely, comprehensive, and reliable support throughout their transactions.

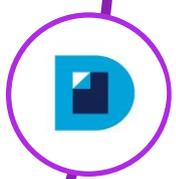

A

Microsoft Azure AI is an integrate AI platform that we have used with custom built applications for internal use that help with summarising laws, extracting key information from large data sets and other similar tasks that help improve the turnaround time of repetitive back-office tasks like KYC, Knowledge management etc.

Contract Express is a leading document automation platform, to transform the way legal documents are drafted. Contract Express automates document generation using structured logic and verified data, producing consistent, market-aligned drafts in a fraction of the time. The platform reduces manual input and drafting errors, standardizes clause language, and enables faster turnaround without compromising quality.

D

Definely is an innovative proof-reading and review solution that simplifies the management of definitions, cross-references, and key clauses within complex legal documents. It shortens review cycles, prevents definitional drift and broken references, and serves as a robust quality check, improving accuracy while reducing rework.

Draftable delivers clear, reliable comparisons across document versions, highlighting even subtle textual and structural changes. The result is faster, more transparent negotiations, fewer missed edits, and a defensible audit trail that supports informed decision making in high stakes transactions.

A

Alexa Translations provides domain-aware, multilingual translations tailored to legal usage and jurisdictional nuance. It improves speed and consistency in cross-border matters, maintains terminology integrity, and enables clients to proceed confidently in international transactions.
